

GET READY FOR THE SEASON AHEAD!

Gastric ulcers are becoming increasingly common and something we see more and more frequently.

If you have noticed that your horse is losing condition, has a poor coat, is uncomfortable when tacking up, any change in demeanour and/or behaviour or colic signs, then they may have gastric ulcers.

The only way to diagnose ulcers is to visualise them by passing a gastroscope to determine the type and severity of the ulcers and the best course of treatment.

Throughout March we are pleased to be offering the following dates for a **SPECIAL REDUCED PRICE** of £150, including sedation.

The offer is valid for the following dates only:
1st March, 8th March, 15th March and 29th March.

**There must be a minimum of 3 horses for each session to run and all payments must be made in advance. Places may be limited.*

Please contact the office for more information and to book your place.
